In IC testing, board level testing has become increasingly important as the number of devices to be tested has increased. For example, with the growing number of CPUs on a chip, with CPUs becoming more complex, and with more devices on a board, the testing time for such systems is becoming long. In addition, the cost of tools needed to perform such testing is becoming high, which can in turn lead to expensive testing. This means that it is becoming important to have testing that can be done in a shorter time and with lower equipment cost. The IC testing industry has responded by generating testers that can perform testing in parallel using multiple test channels. The test channels typically include a mechanism for generating test stimuli and a mechanism for collecting test response signals from the IC under test. These mechanism can be implemented using accelerators in a test head that can be placed close to the IC. With the available test channels, the conventional approach has been to construct a test

Estimate for the risk of hepatitis C in relation to AIDS risk behavior in injection drug users: a pragmatic cohort study. Injection drug users (IDUs) are of increasing concern in seroepidemiology in developed countries. Our aim was to estimate the risk of hepatitis C virus (HCV) infection in IDUs. The study cohort of male IDUs in Amsterdam, The Netherlands, was selected at an HIV clinic. At baseline, 554 male IDUs were interviewed and/or tested for serum antibodies against hepatitis C. A total of 44 respondents met the definition of an AIDS-def

The software provides a full test example of the source code, and this can be easily integrated into your own software applications. Announcing Kickstarter for 3D Printable Objects - peterarmstrong ===== adamzochowski I would be worried that they would not distinguish real kickstarter projects from many clones, and would treat the clones as real. They have to penalize the projects if they see clones, because otherwise they will get rich off the other fools. --- peterarmstrong They already have a working model of how they intend to handle this: the Kickstarter exchange. These are not clones because they are manufactured instead of created. Q: Loop using MongoDB while reading from another collection Okay I'm stuck with this one, and there seems to be a lot of similar questions out there but I'm not getting anywhere. Basically I have a list of papers with authors. The papers have date of publication. I'm trying to get a list of authors sorted by their dates of publication. For example: Robbie says Tom says Jon says Jake says Robbie says again Tom says again Jon says again Jake says again I've already ordered by year and by month but then what? How do I go about looping over each author's publication on a daily basis? A: Assuming that you have MongoDB's basic functionalities: db.authors.aggregate({ \$sort: { date:
